

Aspen Customer Gallery: Alan von Ahlefeldt's Piper Turbo Lance II

# "The Aspen equipment simplifies the complex duties of flying."

"I've accumulated 10,000+ hours of flight time over my flying career, including over 7,000 hours of flight instruction since 1976. I've also been fortunate in becoming familiar with many makes and models of avionics technology over the years. When it became possible for me to upgrade the panel in my Lance, I chose Aspen because of the ease of use, the amount of flight data available, the compact format – which greatly facilitates the instrument scan, the quality...and the fact that all of this is provided at a price that beats the competition. For me, the Aspen equipment is a critical component to greater situational awareness and it simplifies the complex duties of flying."

## EVOLUTION FLIGHT DISPLAY SYSTEM

## CONNECTED PANEL™

Aspen's new Connected Panel™ technology connects your smart portable device with panel-mounted avionics — find out more at [connectedpanel.com](http://connectedpanel.com)
